MOBILE WATER PURIFICATION

Pure Water Direct from Source

Fresh. Safe. Reliable.

# Introducing a Water Purification System You Can Depend On

A person wearing a black jacket is filling a clear plastic water bottle from a tap. The tap has a wooden handle. Water is splashing from the tap into the bottle. The background is a blurred waterfall, suggesting a natural water source.

Wananchi designs, develops, manufactures and integrates mobile and static water purification systems for humanitarian, emergency response, military, commercial and expeditionary applications.

Known for the outstanding quality of the design, build, and function that characterises its revolutionary range of Séon Water Purification Technology systems, Wananchi is fast becoming an established global presence in the mobile water purification market, providing safe drinking water from wherever there is an existing source.

# Séon Water Purification Technology

“Water, water everywhere – nor any drop to drink...”

*Samuel Taylor Coleridge: The Rime of the Ancient Mariner*

Wherever you are in the world, just because water is already present doesn't mean that it's necessarily safe to drink – particularly if it's not from a reliably-treated piped supply, or exists in the form of seawater, rivers, streams, or still reservoirs such as ponds or lakes.

Traditionally, the risks associated with drinking from them invariably leads to the implementation of complex and expensive installation projects or, alternatively, bottled water being considered as the safest source – often resulting in the need to ship an inordinate supply, and frequently accompanied by considerable cost, waste and logistical challenges.

However, the emergence of water purification technology is rapidly becoming a more viable and convenient option...

## **Point of Use, Mobile Water Purification: Cost-Effective, Convenient and Eco-Friendly**

Wananchi's range of Séon Water Purification Technology systems provide a reliable, robust and easy-to-use solution for when drinking water is required in the field – whether for use in humanitarian aid and disaster response, military specific scenarios, commercial projects and events, or expeditionary support.

## **Why transport water if it's already there?**

# Séon Product Range

## Séon UV & Séon RO Seawolf Versatile, portable water purifiers

Séon UV (Ultra Violet) is the original water purification system within the Wananchi range. Equipped with an innovative filtration system, integral pump and power pack whilst packaged in a Military standard, man portable housing, Séon UV can be set ready for use in only a few minutes for whole teams of people.

Séon RO Seawolf is its sister system capable of producing fresh water direct from the sea.

## Séon IFC & Séon VS Containerised water purification systems

Séon IFC and Séon VS are containerised water purification plants designed as water purification on a municipal/village community scale. Séon IFC is an automated, self-cleaning system capable of producing 5.5m<sup>3</sup> of fresh water per hour; this system is offered with remote monitoring by our technical team here in the UK. Séon VS provides a cost effective solution designed for simplicity and reliance for humanitarian aid scenarios where funds, power and skilled labour resources are at a premium.

## Séon UVT & Séon TRO Seawolf Trailer mounted, high volume water purifiers

Séon UVT is a bigger, higher capacity version of Séon UV. It uses a similar water purification process with additional chlorine dosing for storage of water. Powered by its on board generator or external power source, it can deliver up to 7200 litres of fresh, safe water per hour.

Séon TRO Seawolf is its sister system; based on a similar format it produces high volumes of fresh, potable water using its military approved RO (Reverse Osmosis) system.

## Séon Water Purification Technology

Tough, reliable, high quality mobile water purification systems designed to withstand the harshest of environments to produce fresh, potable water direct from source.

## Wananchi – From a Remote African Village to a Global Vision

From initial involvement in on-location water purification projects in remote parts of Africa, Wananchi was born.

Having experienced first-hand the logistics issues of water transportation and provision, Wananchi committed to developing the quality, durable, simple-to-use Mobile Water Purification Systems currently employed in many countries today. It's these features, underpinned by comprehensive design, unerring attention to detail, high-end components, and resilient build quality, which set Séon Water Purification Technology apart – and ensure that it functions easily and reliably wherever and whenever you need it, time after time.

Our equipment and systems are tailored to withstand the environmental, situational and operational demands for which they're required, no matter how remote or challenging. Where practicable, all components are concealed and protected from user and environmental exposure, and all specifications and procedures are in keeping with ISO 9001:2008.

Backed up by specific user product and maintenance training programmes, a continual global maintenance and support network means that projects are always sustained, with remote monitoring options also available.

Such is the widespread need for fresh drinking water for humanitarian, military, and commercial or expeditionary projects, Wananchi's involvement is now on a global scale.

**If you need a water purification system that you can depend on, Wananchi is the partner to trust.**

Need safe water you can depend on?

Let Wananchi help you with your next project...
